## inCABINET Interface

Interface Cable Set for confined space testing

*Consistant Battery Testing From Outside Confined Rack Or Cabinet*

## SAFELY TEST BATTERIES

Midtronics, Inc. introduces the new InCabinet Interface Cable Set designed specifically to solve the problem of difficult access associated with battery testing in confined cabinet or racking spaces. With the easy installation of this unique four-wire, Kelvin connection test cable, capturing consistent battery test data with the Micro Celltron is now possible from outside the confined rack or cabinet.

Developed for six and twelve volt battery installations where taking batteries off-line to test is neither safe nor practical, this accessory test interface cable allows anyone using the Micro Celltron® (CTM) Battery Conductance Tester to make direct battery connections. Batteries are tested on-line without need for physical movement, further enhancing the flexibility of testing with Midtronics' conductance test sets.

Each Micro Celltron will require the InCabinet Battery Micro Celltron Cable to guarantee a safe, repeatable test connection every time. Make your job easier and more productive by turning those nearly impossible routine battery testing and maintenance visits into quick, safe, and accurate test sites. Contact Midtronics, Inc. with any application questions.

### InCabinet Kelvin Battery Interface Cable Set:

- 4-pin connector, 4 X 16 AWG, 26 inches long
- Sold as a set of 4 cables
- Part Number: KBC-426

### InCabinet Battery Micro Celltron Cable:

- w/4 pin companion connector and DB-9 connector
- Part Number: KTC-400

### Specifications:

#### KBC-426 InCabinet Kelvin Battery Interface Cable Set

- Length 26.0"/68.6 cm Spread at 9"
- Cable gauge 16
- Connector 4 position
- Terminal ends Ring type (proper tools required for battery post torque application)

#### KTC-400 InCabinet Battery Micro Celltron Cable

- Length 36"/91 cm
- Connector 4 position mate-n-lock
- Test set connector 9 Pos DB
